

Kuan Yi Wang

(438) 722-0688 | ky7wang@uwaterloo.ca | [LinkedIn](#) | [GitHub](#)

EDUCATION

University of Waterloo
Bachelor of Computer Science

Expected April 2029
Waterloo, ON

TECHNICAL SKILLS

Languages & Data: Python, SQL, Bash, NumPy, pandas, scikit-learn

Deep Learning: PyTorch, PyTorch Geometric, Transformers, nnU-Net, CUDA, DDP, BF16 mixed precision

Engineering: Model evaluation, inference optimization, agent orchestration, Git, Linux, CI/CD, Google Cloud

EXPERIENCE

Morgan Stanley

May 2026 - Aug. 2026

Software Engineer Intern

Montréal, QC

- Built Python automation for parallel AI agents to implement trading-rule changes across SQL schemas; accelerated rule insertion 20x for a Morgan Stanley brokerage platform (Pantheon) processing billions of transactions daily.
- Orchestrated Jira intake, code changes, SQL updates, and unit/regression testing through a Python scripting CI/CD workflow.

Neuropoly (Mila)

June 2025 - Jan. 2026

Data Scientist Intern

Montréal, QC

- Improved segmentation accuracy by 45% by training and fine-tuning PyTorch 3D U-Nets on MRI scans to identify spinal rootlets and multiple sclerosis lesions, developing medical-imaging models for the open-source Spinal Cord Toolbox.
- Accelerated 3D U-Net inference by over 125% through MRI cropping and resizing focused on spinal anatomy.
- Accelerated MRI/CT annotation and segmentation by over 80% through contributions to the SlicerCART image viewer.

PROJECTS

Graph Neural Network for Quantum Error Correction | [ISEF Project Gallery](#) · [GitHub](#)

Oct. 2025 - May 2026

- Built a PyTorch Geometric GraphSAGE decoder to identify quantum-computing errors; used 80% fewer parameters than a dense neural network at distance 7, with 94.8% versus 89.3% accuracy on 10K simulated samples.
- Benchmarked graph decoders across code sizes and noise levels; averaged 23K samples/second over five timing runs on an RTX 5070 Ti at distance 7 and batch size 64, measuring decoding accuracy and batched inference throughput.
- Earned a Silver Award at the International Science and Engineering Fair (ISEF), Physics & Astronomy.

Genie-Inspired Doom World Model | Generative Video | [Paper](#) · [GitHub](#)

Sept. 2026

- Trained a PyTorch VQ-VAE on 600K Doom gameplay frames using CUDA and distributed training on 2 H100 GPUs; achieved 37.43 dB reconstruction PSNR across 4,096 frames from 256 test clips for a three-stage world model.
- Implemented spatiotemporal Transformers and latent-action learning for video prediction; reduced MaskGIT masked-token validation loss from 7.10 to 1.94 across 128 clips and published an illustrated write-up of the architecture and experiments.

FacePred | Speech Forecasting with JEPA | [GitHub](#)

Aug. 2026

- Built a causal PyTorch Transformer to forecast both speakers' activity two seconds ahead from speech; compared HuBERT embeddings, voice-activity detection, and JEPA training in 30 MapTask runs across 10 configurations and 3 random seeds.
- Raised development average precision from 0.709 to 0.738 versus an acoustic-only JEPA baseline across 3 seeds; implemented cached features, resumable training checkpoints, and causal-input checks while keeping the test set unopened.

LEADERSHIP

Global Talent Forum (Piñata Pitch)

Sept. 2024 - Present

Co-Founder

San Francisco Bay Area, CA

- Co-founded the largest student tech pitch competition based in Montreal, scaled to 2000+ members world-wide.
- Organized the Special Edition of Builder Sunday (AI Build Day x Pinata Pitch) with Shopify, helping more than 200 builders launch their startup in a hackathon-style networking event at the Montreal Shopify office.
- Organized unfounders, a hackerhouse in San Francisco promoting untraditional founders during a16z Tech Week.
- Raised \$35 000 and organized Piñata Pitch x Startupfest 2026, backed by Mila, Botpress and Morgan Stanley.
