EDUCATION

University of Waterloo

Bachelor of Computer Science

June 2030

Waterloo, ON

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, SQL

Frameworks: Flask/React/Next.js, PyTorch, Tensorflow

Developer Tools: GitHub Copilot/Cursor, Figma, Google Cloud, Claude Code, Codex, OpenClaw

Libraries: IBM Qiskit/Google STIM, scikit-learn, numpy, pandas

INDUSTRY EXPERIENCE

Technology Analyst

May 2026 – curr.

Morgan Stanley

Montréal, QC

- Built an agentic orchestration pipeline for FIX message rule persistence across multiple database schemas.
- Improved tag accuracy and reduced manual triage by 20 times across database workflows.
- Achieved a linearly faster insertion rate via parallel agent execution and automation, from open Jira ticket to completing regression testing across the CI/CD pipeline.

Research & Development Intern

June 2025 – Jan 2026.

Neuropoly (Mila Montreal)

Montréal, QC

- Trained and fine-tuned nn-UNet deep learning AI models to automate the segmentation of spinal cord multiple sclerosis lesions on contrast and modality agnostic medical images.
- Increased inference speed of spinal rootlet segmentation 3D-UNet by 125% through image cropping and resizing.
- Contributed to SlicerCART, an open-source module optimizing the segmentation and annotation speed of Magnetic Resonance Imaging (MRI) and Computed Tomography (CT) images by over 80%.

NOTABLE RECENT PROJECTS

GNN Quantum Error Decoder, ISEF

Oct. 2025 – May 2026.

Phoenix, AZ

- Grand Award (2nd) at the International Science and Engineering Fair, Physics & Astronomy (<0.1% worldwide).
- Designed input-invariant graph neural networks (GraphSAGE) to decode quantum errors on surface codes.
- Achieved error resistance with 5-7 times fewer parameters than standard neural networks, while constantly inferencing at sub-50 microseconds speed.

Cortesol, Hackthe6ix 2026 Finalist Project

Aug. 2026 – curr.

Toronto, ON

- Fine-tuned Qwen3.5-9B, aiming to develop critical thinking over an existing weighted graph knowledge base.
- Leveraged supervised fine-tuning, on-policy distillation and group relative policy optimization resulting in 95 % graph expansion accuracy.
- Built a deterministic evidence pipeline that blocks direct confidence rewrites, cutting false-confidence jumps by 60-80 % and keeping 0 direct confidence-write paths.

Twin, Hack the North 2025 Project

Sept. 2025

Waterloo, QC

- Developed vision model for always on agent using OpenCV, Gumloop and Snapchat Spectacles SDK.
- Leveraged Realtime Supabase for real deployment within hackathon grounds.

COMMUNITY INVOLVEMENT

Piñata Pitch (non-profit) Co-founder

Sept. 2024 – curr.

San Francisco Bay Area, CA

- Co-founded the largest student tech pitch competition based in Montreal, scaled to 2000+ world-wide.
- Organized the Special Edition of Builder Sunday (AI Build Day x Pinata Pitch) with **Shopify**, helping more than 200 builders launch their startup in a hackathon-style networking event at the Montreal Shopify office.
- Organized unfounders, a hackerhouse in San Francisco promoting untraditional founders during a16z Tech Week.
- Raised \$35 000 and organized Piñata Pitch x Startupfest 2026, backed by Mila, Botpress and Morgan Stanley.
